

METRIXCARE BENEFITS

CREATING AN ENVIRONMENT WHERE EXCELLENCE CAN FLOURISH

Affordable & Rapid ROI

Increase operational efficiency for an ongoing return on investment.

Secure and Reliable

Professionally managed enterprise class service. Fully compliant with Australian Privacy Principles.

Flexible and Scalable

Easily adapt and expand solutions to support any number of users. Unify many existing sources of data for integrated analysis.

Easy to Use

Highly intuitive with low training means high data quality and effective users.

Visual Thinking

Data visualisations that make data manageable and meaningful. Reveal hidden insights into performance and see actionable improvements.

Collaborate & Compete

Benchmark against industry performance. Share improvement stories & maximise competitive advantage.

HEALTHCARE VALUE ANALYTICS

INFECTION CONTROL

INFECTION CONTROL SURVEILLANCE

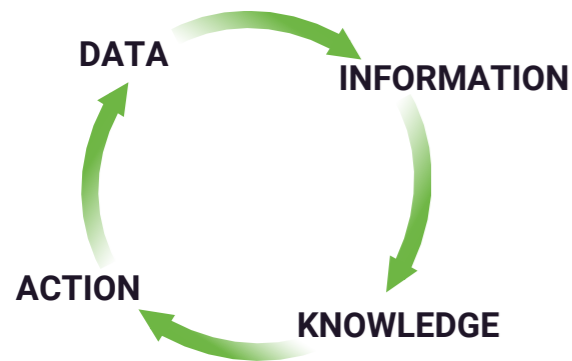

It can be a challenge allocating limited resources to focus on the right areas for healthcare improvement. The time and effort required for comprehensive infection surveillance makes it hard to be pro-active. A streamlined approach with real-time data can allow valuable staff resources to be reinvested into prevention and education. Healthcare facilities want to unlock greater value from their infection control data in a way that is manageable, meaningful and actionable to deliver better outcomes that matter to patients.

STATUS AT A GLANCE

Analyse a wide range of real-time performance measures to provide visibility into infection control processes & patient outcomes.

Easily view the entire infection governance framework to see status-at-a-glance and drill down to details using statistical process control charts.

Visually share relevant feedback and identify opportunities for improvement.

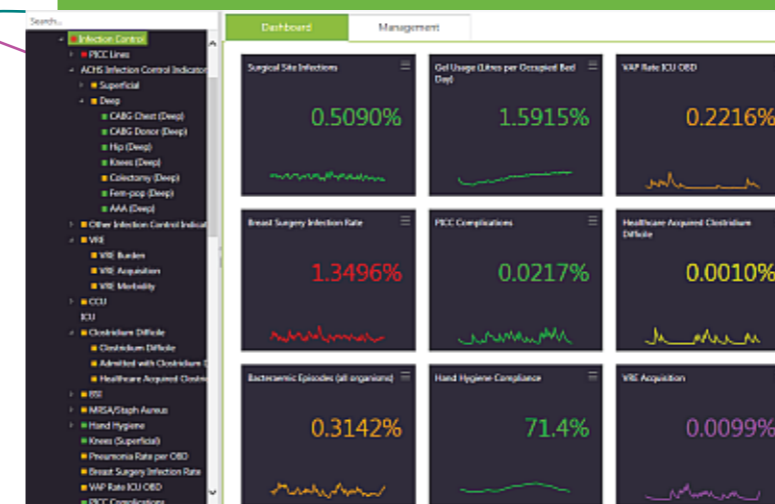

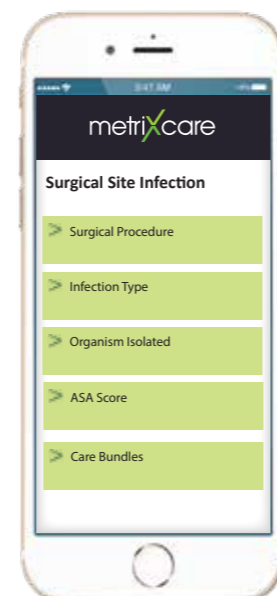

IMPROVEMENT JOURNEY

- Gain performance visibility through regular measurement of processes, outcomes and risk
- Assess the extent of risks & the nature of key problems
- Identify reasons why issues occur and explore possible solutions
- Create and implement interventions that help reduce or avoid harm and unnecessary cost
- Continue to monitor performance measures to see if the solutions are making a positive difference to patient care

INFECTION SURVEILLANCE FEATURES

The cloud module supports

- Surgical Site Infection (SSI)
- Multi-Drug Resistant Organisms (MDRO)
- IV line & device management
- Antibiotic compliance & stewardship
- Easily integrate with major EMR/PAS systems
- Link to accreditation and compliance frameworks
- Bedside data collection & audits
- Hand Hygiene Compliance
- Infection risk prediction & machine learning models

Choose from an extensive library of pre-defined infection control process and outcome indicators.

Deliver manageable and meaningful data to those most able to make a difference.

Explore Data in a highly visual and interactive environment to unlock hidden patterns and insights.

LEARNING & IMPROVEMENT

Analyse variation and detect issues as they arise with Statistical Process Control Charts (SPCC). Capture the stories behind improvements and focus on clusters of issues where greatest improvements are possible.

"It was essential for the hospital to streamline the collection of information into an integrated performance management perspective. MetriXcare provides a central reference point for our clinical teams and underpins our comprehensive quality improvement culture."

St Andrews Private Hospital, Australia
