HEALTHCARE VALUE ANALYTICS

METRIXCARE BENEFITS

CREATING AN ENVIRONMENT WHERE EXCELLENCE CAN FLOURISH

Affordable & Rapid ROI

Increase operational efficiency for an ongoing return on investment.

Secure and Reliable

Professionally managed enterprise class service. Fully compliant with Australian Privacy Principles.

Flexible and Scalable

Easily adapt and expand solutions to support any number of users. Unify many existing sources of data for inegrated analysis.

Easy to Use

Highly intuitive with low training means high data quality and effective users.

Visual Thinking

Data visualisations that make data manageable and meaningful. Reveal hidden insights into performance and see actionable improvements.

Collaborate & Compete

Benchmark against industry performance. Share improvement stories & maximise competitive advantage.

PUBLIC REPORTING

The 2011 iAWARDS
National Award Winner

The 2012 iAWARDS
South Australia Award Winner

Publicly available information on healthcare performance encourages transparency and allows patients to make informed choices for better care. Cumulative effects of informed choices contributes to improvement across the entire healthcare system and can be an important driver of engagement to help focus on what matters most to patients.

Metrixcare Public Reporting delivers numerous benefits by driving healthcare improvement through greater patient choice. Public reporting can also enhance the profile, reputation and market share of healthcare organisations.

However, public reporting initiatives present many challenges and pitfalls. Generally, consumers don't believe that there is actually a quality gap in healthcare. They assume that healthcare services are always safe, efficient and of high quality. Consumers define quality differently to providers which means that any public reporting projects must ensure that performance information is meaningful and easy to understand for the purpose of patient choice in making decisions about their care.

There are also dangers in making too much information available which can be counter-productive. Added to this are tensions between internal and external reporting requirements which can inadvertently encourage gaming, cream skimming & blame shifting by healthcare providers if not done carefully within an environment of trust and transparency.

PUBLIC REPORTING MODULE LIVE DEMO

View Live Demo

INTEGRATED FEATURES

- Highly configurable visualisations are available for public reporting that can be easily integrated into public facing web sites
- Data visualisation designs reflect international best practice for public transparency
- Supports progressive expansion of public reporting initiatives over time
- Multiple indicators can be published in a summary view with colour coding of overall performance
- Communicate past and current performance, benchmark comparisons and performance goals
- Generate indicators directly by linking to the Metrixcare National Safety and Quality Healthcare Standards (NSQHS) Module

IMPROVEMENT JOURNEY

- Facilitates trust, transparency and accountability of performance with clinicians
- Supports patients in making informed treatment choices
- Promote achievements and projects that provide better care
- Provides evidence of patient feedback and engagement for Accrediation and National Quality Standards
